

GetGenome Newsletter

#031

October 2025

We are pleased to present the October 2025 edition of our monthly newsletter, providing a snapshot of GetGenome's progress and key highlights. Remember, you can find all our monthly newsletters here - <https://getgenome.net/network>. The main highlights this month include:

Democratising genomics in the age of AI 🔥

Earlier this month, we had the opportunity to share our vision with members of the Google DeepMind team during their visit to Norwich. We spoke about how GetGenome is lowering barriers for researchers by enabling access cutting-edge technologies, including AI, to accelerate innovation and discovery. We're excited to see where our growing programme of AI training will lead the researchers we support.

Share your voice: Is AI shaping your research?

We are exploring how researchers are using AI tools and where additional support or training from GetGenome could have the greatest impact. Please complete [this short survey](#). Your insights will help us shape future resources and workshops for the community.

The First Tunisian Bioinformatics Conference – We are bringing our AI game

We are just a few days away from joining the Tunisian community of current and aspiring bioinformaticians. The GetGenome team will be sharing how biologists can harness AI-powered tools to advance genome annotation and extend this to protein structure prediction. We look forward to seeing you at the (first) Tunisian Bioinformatics Conference soon.

A thriving network: 100 institutes across 25 countries

We are continually reminded that our network is the most valuable resource at GetGenome. Each pin on the map represents an institute or organisation where we have directly supported at least one researcher to advance their science. We are currently processing samples from our GGAfrica2025 Call For Projects, expanding our network, and look forward to sharing updates.
