

GetGenome February 2024 Report

I am pleased to present the February 2024 edition of our monthly report, providing a snapshot of GetGenome's progress and key highlights. The main highlights this month include:

1. GGPakistan2023 Call For Projects Awardees selected

The national selection committee, along with GetGenome, have selected 24 projects to support. We have received 38 samples so far from Pakistan.

2. GGLatAm2024 Call For Projects Committee formed

The committee is chaired by Dr Maria Eugenia Segretin (INGEBI-CONICET, Argentina) and consists of 9 members from Argentina, Uruguay, Chile, Columbia and Ecuador. We will launch the call imminently.

3. GGPlasmidSeq received its first samples

We have accepted plasmid vectors from several researchers based in Argentina, India and Turkey who had applied for the open call offered to researchers in over 100 countries.

4. GetGenome Symposium and conference in Tunisia

We ran our first in-person GetGenome Symposium to engage with GGTunisia2022 awardees. Over 20 participants joined us in Tunis and presented their work.

5. The GetGenome number counter is growing

As we support more ECRs around the world, it is always exciting to capture the increasing scale of our activities!
